

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

RACE PROBLEMS IN AMERICA¹

THE development of the American nation through amalgamation of diverse European nationalities and the ever-increasing heterogeneity of the component elements of four people have called attention to the anthropological and biological problems involved in this process.

I propose to discuss here these problems with a view of making clear the hypothetical character of many of the generally accepted assumptions. It will be our object to attempt a formulation of the problems, and to outline certain directions of inquiry, that promise a solution of the questions involved, that, at the present time, can not be answered with scientific accuracy. It is disappointing that we have to accept this critical attitude, because the events of our daily life bring before our eyes constantly the grave issues that are based on the presence of distinct types of man in our country, and on the continued influx of heterogeneous nationalities from Europe. Under the pressure of these events, we seem to be called upon to formulate definite answers to questions that require the most painstaking and unbiased investigation. The more urgent the demand for final conclusions, the more needed is a critical examination of the phenomena and of the available methods of solution.

Let us first represent to our minds the facts relating to the origins of our nation. When British immigrants first flocked to the Atlantic coast of North America, they found a continent inhabited by Indians. The population of the country was thin,

MSS. intended for publication and books, etc., intended for review should be sent to the Editor of SCIENCE, Garrison-on-Hudson, N. Y.

¹ Address of the vice-president and chairman of Section H, American Association for the Advancement of Science, Baltimore, 1908.
